The Creators Project

Sep 24 2015, 5:53am

In honor of the fourth anniversary of the Fukushima Daiichi Nuclear disaster that devastated the region, Japanese art collective Chim ↑ Pom created a group

exhibition inside three buildings within the Fukushima exclusion zone.

“Because of the radioactive contamination in the area, people will not be able to visit the exhibit. In this way it will serve as a monument to the disaster, and its ongoing consequences,” says Franco Mattes. In this video we speak with two of the six ChimPom members, Ryuta Ushiro and Ellie, who give us a tour of the affected area. The two explain the intention behind the project. We get a first-hand artist tour of the region and see behind-the-scenes footage of some of the art installations. The Creators Project interviews featured artists Ai Weiwei, Trevor Paglen, and Eva and Franco Mattes about their participation in the nuclear art project.
